

The listing of claims will replace all prior versions, and listings, of claims in the application:

1. **(Currently Amended)** A method for producing at least one glass substrate having a predetermined shape, the method comprising:

providing a processing fixture including at least one curved support member having a predetermined curvature, the at least one curved support member being chemically unreactive with the glass substrate and configured to support the at least one glass substrate;

placing the at least one glass substrate on the at least one curved support member; and

heating the at least one glass substrate to a predetermined temperature for a predetermined period of time, the predetermined temperature being below the glass softening point and sufficiently high enough to cause glass shape change, whereby the at least one glass substrate conforms to the predetermined curvature during the predetermined period of time.

2. **(Original)** The method of claim 1, wherein the processing fixture includes a plurality of curved support members.

3. **(Original)** The method of claim 1, wherein the processing fixture includes a plurality of curved support members for accommodating a plurality of glass substrates.

4. **(Original)** The method of claim 1, wherein the predetermined temperature is within a range of temperatures between 400-700°C.

5. **(Original)** The method of claim 1, wherein the predetermined period of time is within a range of up to several hours.

6. **(Original)** The method of claim 5, wherein the predetermined period of time is approximately one hour.

7. **(Original)** The method of claim 1, further comprising the step of cooling the at least one glass substrate, whereby the at least one glass substrate retains the predetermined curvature.

8. – 15. **(Canceled)**
